

SCOTTISH MATHEMATICAL SCIENCES TRAINING CENTRE

Notes for Students (revised May 2024)

1 Introduction

Welcome to the Scottish Mathematical Sciences Training Centre! SMSTC is a large joint venture, relying on contributions from staff and students across Scotland. Some aspects of the system are therefore likely to be unfamiliar; these notes are intended to provide both an introduction and a source of information that you can refer to over the coming year.

The overall aim of SMSTC is to provide broadening training for PhD students. In the past, a perceived weakness of PhDs in the UK was that although students gained a great deal of in-depth knowledge of their subject speciality, this was at the expense of wider learning. SMSTC modules aim to redress that balance. Most of our modules are intended principally for students who are *not* in that research area, though they may also be useful to those who are. So, don't hesitate to spread your wings and learn about something different. You will grow more as a mathematician by taking modules beyond your usual interests, and in which you feel slightly out of your depth, than by sticking to your comfort zone.

We hope you enjoy SMSTC and find it intellectually enriching! Thank you for your participation.

Fraser Daly (Director)
on behalf of the Academic Steering and Management Group (ASMG)

2 Themes and modules

SMSTC modules are organised in four **themes**: *Analysis (ANA)*; *Applications of Mathematics (AOM)*; *Probability and Statistics (PAS)*; *Structure and Symmetry (SAS)*. Each theme contains four self-contained **core modules**, which may have different prerequisites. Each SMSTC core module runs every year.

Supplementary modules on various topics are also offered, but will not necessarily follow the pattern described in this document. Supplementary modules may be more specialised and/or advanced than the core modules. The selection of supplementary modules offered by SMSTC varies from year to year.

The **prospectus** (available on the SMSTC website, www.smstc.ac.uk) gives a brief overview of each module, including the **expected prior knowledge**. SMSTC students have widely differing backgrounds, so you are advised to check the prospectus rather than to make assumptions about whether a module ought to be suitable for you.

Each module has a page on the SMSTC website, where you will find an overview of the module, contact details for the module lecturers, and links to material and assessments. Lecturers will make **notes** and/or **slides** available on the SMSTC website, often in advance of the lecture. (They may also recommend other supplementary reading.)

Once you have **registered** for SMSTC, you can **enrol** on modules from the "My SMSTC" page. You will need to be enrolled to submit assignments and to receive messages about

the module; enrolment also lets us know how many students are taking each module.

3 Opening symposium and other events

This will take place on Wednesday 2nd – Thursday 3rd October 2024 in Perth. Details will be available nearer the time on the SMSTC website (under ‘Symposia’). During this event, a representative of each theme will give a short presentation on that subject. One purpose of the event is to give students a flavour of a wide range of interesting topics in mathematics, and another is to help those who have not finalised their module choices to come to a decision. There will also be presentations on other aspects of life as a PhD student, and social events to give you a chance to meet other students from across Scotland.

4 Timetable and semesters

We run two ten-week semesters, October–December and January–March. Details of the timetable for each semester can be found in the separate Timetable document on the SMSTC website.

5 Videoconferenced classes

Classes may follow various formats, including traditional lectures, “flipped classes” with preparatory work or reading, or seminars in which students present solutions to problems. Taking a videoconferenced class can take a little getting used to, and interacting with the lecturer may not feel natural at first, but you are strongly encouraged to do so. **Questions** are always warmly welcomed by lecturers!

Classes will be delivered using Zoom. This raises some issues around privacy and security; please see our separate **policy on online videoconferencing** (available on the SMSTC website) for details. Note in particular that SMSTC classes are not routinely recorded, and **students are not permitted to record classes**.

You are expected and encouraged to participate in SMSTC classes by gathering in groups (for example, in a dedicated videoconferencing room at your university). Details of videoconferencing rooms are available on the SMSTC website or from your local Postgraduate Director. It is also possible to join Zoom classes from elsewhere (e.g., from your office or home) if you are unable to attend at your institution. No specific permission from the module leader or SMSTC Director is required for this.

6 Tutorials

Exercises will be provided on the SMSTC website. Outline **solutions** may also be provided. However, SMSTC module teams are not responsible for tutorial support. This is organised by each university individually and could consist of scheduled classes or a designated person who will deal with questions on request. If you are unsure who is responsible for tutorials in your institution you should contact your department’s Postgraduate Director in the first instance.

7 Assessment of modules

Only PhD students of the partner departments should submit **assignments** to SMSTC. Students taking SMSTC as part of a taught MSc or at an external institution will have local arrangements for assessment.

- The modules are assessed independently of each other.
- Each module's assessment regime should consist of one or two assignments, typically taking a total of 10–12 hours of work.
- You should be given advance notice of the number of assignments and their deadlines, and usually given at least two weeks to complete each one. The final deadline should be no more than three weeks after the end of the semester.
- You may be encouraged to work collaboratively to learn the topic, but you should produce your own assignment solutions. Submitting an assignment is taken as a declaration that it is your own work. Identical scripts are not acceptable, and **suspected plagiarism or misconduct** of any kind is taken very seriously by both SMSTC management and partner departments.
- On most modules, the assignments will be submitted by uploading them to the website, via the “My SMSTC” page. However, some modules may find it more convenient to make different arrangements. Please pay careful attention to any instructions about the format of submitted work.
- **Grades** will be released via the website, via the “My SMSTC” page, and **feedback** may also be provided either via the website or in hard copy. Individual assignments may be awarded either a percentage or letter grade, but the overall result for the module will be a letter grade, on the following scale.
A = excellent (e.g. more than 75%);
B = good (e.g. 60–74%);
C = satisfactory (e.g. 40–59%);
U = unclassified (e.g. below 40%);
NA = not taken for assessment (the default if you submit nothing).
- We do not offer “**resits**”, but if you take a module twice in different years then you will be issued with a separate grade letter each year. Your performance in one year will not affect your grade in a subsequent year.

8 Workload

SMSTC is designed to be used **flexibly**. We do not prescribe the number of modules you take or in which year you take them – any such requirements may be set by your department, funder or supervisor, but not by SMSTC.

The amount of time you need to devote to each module will vary according to your previous background and all sorts of other factors. We expect that “on average” (whatever that means) each module will take about 25% of your time, i.e. an average of 9-10 hours per week. However, assignment deadlines for the various modules tend to cluster together around the middle and the end of each semester, so you may find you have several deadlines in quick succession. Please be prepared for this to happen, manage your time accordingly, and ensure that your supervisor is aware of when these peak workload periods will be.

9 Final grades

SMSTC does not award any formal qualifications, or make progression decisions: we return your final grades to your department, who may then use them as part of a formal appraisal or credit system. We therefore cannot provide an official transcript of your results. However, at the end of each academic year in May we email every student a **letter confirming their grade** for each module. You may find this letter useful if you need to establish to your department or to a funding body that you have taken these modules.

10 Data protection and privacy

The basic rules we use for **data protection** are that:

- students can see only their own assessment results, feedback, and data;
- lecturers, module leaders and Theme Heads can see only the results and feedback for students on their modules;
- PhD supervisors and universities can see only results and feedback for their own students.

The official **privacy policy** is linked to from the bottom of each page on the website.

11 Personal circumstances, special requirements and extensions for assignments

Unfortunately, SMSTC is not automatically informed if a student has special requirements for teaching or assessment, or if there are personal circumstances affecting their study.

If you do require **adjustments** to be put in place then please either contact the SMSTC Director or ask your supervisor, Postgraduate Director, or Disability Co-ordinator to do so on your behalf. You do not need to provide evidence directly to us or to share any details; SMSTC will always accept the assessment of your needs made by your institution.

The Director may share information with the teaching teams for your modules, but will do so strictly on the basis of what they need to know in order to accommodate your needs. Information will not be shared further.

Please see the separate policy on the use of Zoom (available on the SMSTC website) on how to request **recording** of SMSTC classes if you have a disability or similar accessibility requirement for which this would be beneficial.

If unforeseen circumstances mean that you would like to request an **extension** for an SMSTC assignment, please contact the module leader in the first instance. You can also contact the appropriate Theme Head (for core modules) or the SMSTC Director (for supplementary modules).
